ALLOWABLE SUBJECT MATTER

Claims 1,6-12,18-19 and 21-25 are allowed.

EXAMINERS STATEMENT REASONS FOR ALLOWANCE

The prior art does not anticipate nor render obvious the combination set forth in the independent claims, and specifically does not teach a heat pump cycle with a control system in a heat pump cycle operable to initiate a defrost mode based upon an algorithm to maximize heat transfer to a hot water supply and operable to minimize the risk of water being heated unduly by hot refrigerant passing through the system heat exchanger during the defrost mode. Prior art further does not anticipate nor render obvious a heat pump cycle with a control system determines an exit temperature of refrigerant has fell below a predetermined maximum temperature prior to heating water in the system heat exchanger during the defrost mode.

Daikan Industries (WO 03/064935) teaches a heat pump which opens a hot gas bypass circuit and stops a water pump for a specified time after an evaporator is defrosted. Hoglund teaches an algorithm for controlling the defrost operation of a heat pump. They however fail to teach the algorithm maximizes heat transfer to a hot water supply and is operable to minimize the risk of water being heated unduly by hot refrigerant passing through the system heat exchanger during the defrost mode pump in order to maximize heat transfer or determines an exit temperature of refrigerant has fell below a predetermined maximum temperature prior to heating water in the system heat exchanger during the defrost mode. This modification would not have been obvious to one of ordinary skill in the art without impermissible hindsight.

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statements for Reasons for Allowance."
